

# **Master of Science in Environmental Physics**

## **Module Guide**

**University of Bremen**

**Faculty 1 Physics and Electrical Engineering**

**17 November 2021**

This module guide details the contents of the master's programme Environmental Physics for informational purposes. Binding rules are set out by the specific examination regulations.

We try to keep this module guide up-to-date, however, modifications with respect to personnel and content may occur.

## Table of contents

<b>Overview / Module Plan</b>	<b>3</b>
<b>Compulsory Modules</b>	<b>5</b>
AMMDA / Applied Mathematical Methods and Data Analysis	5
AtC / Atmospheric Chemistry	6
AtPhy / Atmospheric Physics	7
CliS1 / Climate System I	9
Dyn1 / Dynamics I	10
Dyn2 / Dynamics II	11
MeTe / Measurement Techniques	12
MES / Modelling of the Earth System	13
PhyO1 / Physical Oceanography I	14
RemS / Remote Sensing	15
PresT / Presentation Techniques in Environmental Physics	16
PrEPhy / Preparatory Project	17
<b>Module Master Thesis (incl. Colloquium)</b>	<b>18</b>
MTEPhy / Master Thesis	18
<b>Elective Modules</b>	<b>19</b>
AtCM1 / Atmospheric Chemistry Modelling: Part 1 (Theory)	19
AtCM2 / Atmospheric Chemistry Modelling: Part 2 (Laboratory)	20
AtSp / Atmospheric Spectroscopy	21
BGC / Biogeochemistry	22
CDOL / Chemistry and Dynamics of the Ozone Layer	23
CliM1 / Climate Modelling: Part 1	24
CliM2 / Climate Modelling: Part 2	25
CliS2 / Climate System II	26
DIP / Digital Image Processing	27
FES / Fortran for Environmental Sciences	28
FVTT / Fundamentals of Volcanology and Tephra Transport	29
GenM / General Meteorology	30
GCC / Global Carbon Cycle	31
IMBRS / Ice Mass Balance and Remote Sensing	32
ITE / Instrumental Techniques for Environmental Measurements	33
IEPhy / Isotopes in Environmental Physics	34
MaMCS / Mathematical Modelling of Complex Systems	35
MRS / Microwave Remote Sensing	36
OOOC / Ocean Optics and Ocean Color Remote Sensing	37

PhyO2 / Physical Oceanography II	39
PoOc/ Polar Oceanography	40
PPO / Practical Physical Oceanography	41
<b>Elective Modules / Course Offers from other M.Sc. Programmes</b>	<b>42</b>
01-29-03-RSOC / Remote Sensing of Ocean and Cryosphere	42
08-M27-1-EA1-1 / Lakes and lacustrine sediments	43
<b>Special Module Sino-German Master Programme in Marine Sciences</b>	<b>45</b>
APhOc / Advanced Physical Oceanography	45

## Module Plan / MSc Environmental Physics

Sem.	Compulsory Modules, 69 CP			Master Thesis, 30 CP	Elective Modules, 21 CP	$\Sigma$ 120 CP CP/Semester
1	AMMDA Applied Mathematical Methods and Data Analysis, 6 CP	AtC Atmospheric Chemistry, 6 CP	AtPhy Atmospheric Physics, 6 CP			30
	Dyn1 Dynamics I, 6 CP	PhyO1 Physical Oceanography I, 6 CP				
2	ClIS1 Climate System I, 3 CP	Dyn2 Dynamics II, 3 CP	MeTe Measurement Techniques, 6 CP		Elective Modules as per attachment 2.3 to the exam. reg., 12 CP	30
	MES Modelling of the Earth System, 3 CP	RemS Remote Sensing, 3 CP				
3	PresT Presentation Techniques in Environmental Physics, 3 CP	PrEPhy Preparatory Project, 18 CP			Elective Modules as per attachment 2.3 to the exam. reg., 9 CP	30
4				MTEPhy Master Thesis, 30 CP		30

CP = Credit Points / Sem. = Semester

Abbreviations used in the following module descriptions

CP	Credit points	EC	Example classes
h	Hours	L	Lecture
SWH	Semester weekly hours	Lab	Laboratory
		PS	Proseminar

Remarks:

Module exam: Exam with only one component.

Credit points are granted upon a successful completion of the respective examination(s) of the module.

Combination exam: Exam with several components.

Credit points are granted upon a successful examination performance and a successful course performance.

Partial exam: Exam with several components.

Credit points are granted upon successful examination performance(s) and a successful course performance.

Examination performances are graded.

Course performances are not graded.

## Compulsory Modules

<b>Module code</b>	01-01-03-AMMDA
<b>Module title</b>	Applied Mathematical Methods and Data Analysis
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Mihalis Vrekoussis</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory for MSc Space Sciences and Technologies Compulsory for MSc Space Engineering II Compulsory elective for MSc Physik Elective for MSc Marine Geosciences + MSc Applied Geosciences
<b>Content-related prior knowledge or skills</b>	No formal requirement
<b>Learning contents</b>	<p>The course lectures cover the theoretical and practical basis of the following subject areas:</p> <p>PART A:</p> <ul style="list-style-type: none"> <li>• Calculus I (Functions, theorems)</li> <li>• Calculus II (Differentiations, applications of derivatives, approximations, errors)</li> <li>• Calculus III (Integrations, applications of integrals)</li> <li>• Calculus IV (Series, convergence, divergence)</li> <li>• Linear algebra (vectors, vector-functions)</li> <li>• Differential equations I (ordinary first, second and higher-order differential equations - ODE)</li> <li>• Differential equations II (partial differential equations - PDE)</li> <li>• Exercises on all the above</li> </ul> <p>PART B</p> <ul style="list-style-type: none"> <li>• Introduction to Python (Installation, build-in functions, arrays, data loading, handling, visualizing)</li> <li>• Hands – on examples (numerical approximations, differential equations)</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Introduction to essential and advanced mathematical methods (Part A) and applying these using the Python programming language. In the example classes (part B), students will learn how to apply the taught knowledge, both analytically and numerically. In order to facilitate the latter, students will learn the basics of the Python programming language and how to use Python to solve real-world problems from the course's topic areas.
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation for exam: 68 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester (1st academic year)
<b>Literature</b>	Thomas Calculus 13 <sup>th</sup> or 14 <sup>th</sup> edition (Hass, Heil, Weir) Pearson Mathematical Methods in the Physical sciences (Boas) Wiley
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-AtC
<b>Module title</b>	Atmospheric Chemistry
<b>Responsible for the module, lecturers</b>	Prof. Dr. John P. Burrows / Prof. Dr. Annette Ladstätter-Weißmayer / Prof. Dr. Mihalis Vrekoussis
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	History of the atmospheres of the earth; atmospheric composition; thermodynamics, thermochemistry and chemical equilibria; photochemistry; kinetic theory of reactions and reaction rate coefficients; chain reactions; atmospheric chemical mechanisms and transformations in the thermosphere, mesosphere, stratosphere and the troposphere.
<b>Learning outcomes/ competencies/ targeted competencies</b>	Basics chemistry of the atmosphere
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation for exam: 68 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester (1st academic year)
<b>Literature</b>	<ul style="list-style-type: none"> <li>• John H. Seinfeld, Spyros N. Pandis Atmospheric Chemistry and Physics: From Air Pollution to Climate Change, 3rd Edition</li> <li>• Finlayson-Pitts B. J. and J. N. Pitts, Atmospheric Chemistry</li> <li>• Ann M. Holloway and Richard P. Wayne, Atmospheric Chemistry, RSC Publishing, 2010</li> <li>• John M. Wallace and Peter V. Hobbs Atmospheric Science (Second Edition): An Introductory Survey</li> </ul>
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-AtPhy
<b>Module title</b>	Atmospheric Physics
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. John P. Burrows</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory for MSc Space Sciences and Technologies Compulsory for MSc Space Engineering II Compulsory elective for MSc Physik Compulsory elective for MSc Physical Geography: Environmental History
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	The origin of the solar system and the earth's atmosphere; the evolving atmospheric composition; the physical parameters determining conditions in the atmosphere (e.g. temperature, pressure, and vorticity); the laws describing electromagnetic radiation; the interaction between electromagnetic radiation and matter (absorption emission and scattering); atmospheric radiative transport; radiation balance, climate change; atmospheric thermodynamics and hydrological cycle; aerosols and cloud physics; an introduction into atmospheric dynamics (kinematics, circulation etc.)
<b>Learning outcomes/ competencies/ targeted competencies</b>	An adequate understanding of the fundamentals of atmospheric physics. This addresses a) gaining an understanding the laws of physics, which determine the behaviour of the earth system comprising the sun the atmosphere and earth surface, b) learning the ability to apply the laws of physics to calculate parameters and forecast conditions in the atmosphere.  This knowledge is required for subsequent advanced courses in the M.Sc. programmes. In later life, these learning outcomes are essential for undertaking a) research in atmospheric, environmental and climate science Earth observation and remote sensing form ground based ship, aircraft and space based instrumentation, b) being employment in earth observation, earth science, meteorology, industry, or governmental and space agencies.
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation for exam: 68 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester (1st academic year)

<b>Literature</b>	<ul style="list-style-type: none"> <li>• Houghton, J.T., The physics of atmospheres, Cambridge University Press, 1977, ISBN 0 521 29656 0</li> <li>• Wallace, John M. and Peter V. Hobbs, Atmospheric Science, An Introductory Survey, Academic Press, 2nd Edition 2005, ISBN 0-12-732951-x</li> </ul>
<b>Type of examination / exam components</b>	<p>Module exam  Examination performance: Written exam (or as announced by the respective lecturer)</p>

<b>Module code</b>	01-01-03-CliS1
<b>Module title</b>	Climate System I
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Torsten Kanzow</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Space Sciences and Technologies Compulsory elective for MSc Physik Elective for MSc Marine Geosciences + MSc Applied Geosciences
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Climate on earth / climate variations / the climate system / energy balance models / radiation & convection / role of the ocean in climate
<b>Learning outcomes/ competencies/ targeted competencies</b>	Climate physics
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester (1st academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Written exam (or as announced by the respective lecturer) Course performance: Portfolio (series of exercise sheets or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-Dyn1
<b>Module title</b>	Dynamics I
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Thomas Jung</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Elective for MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Governing equations, basic conservation laws, balances, elementary applications of the basic equations, circulation and vorticity, planetary boundary layer, Rossby waves
<b>Learning outcomes/ competencies/ targeted competencies</b>	Understanding of the basic dynamical processes in atmosphere and ocean; learning how to interpret physical equations physically
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation for exam: 68 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester; yearly
<b>Duration</b>	1 semester / winter semester (1st academic year)
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Holton, <i>An Introduction to Dynamic Meteorology</i>, Elsevier Academic Press</li> <li>• Marshall and Plumb: <i>Atmosphere, Ocean, and Climate Dynamics, An Introductory Text</i>, Academic Press, 2008</li> <li>• Wallace and Hobbs, <i>Atmospheric Science: An Introductory Survey</i>, Academic Press</li> </ul>
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-Dyn2
<b>Module title</b>	Dynamics II
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Gerrit Lohmann</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Fluid dynamics, ocean circulation, wind-driven and thermohaline circulation; atmosphere dynamics, dynamical system theory, non-dimensional parameters, bifurcations and instabilities; Gravity, Rossby and Kelvin waves; Conceptual models, Analytical and Programming techniques; Time series analysis
<b>Learning outcomes/ competencies/ targeted competencies</b>	Advanced dynamics of the ocean and atmosphere, applications in the fields of climate dynamics and fluid mechanics. Programming skills (R studio) and usage of the climate data operators. Theoretical concepts in physics of climate, temporal and spatial scales of climate dynamics
<b>Semester weekly hours (SWH)</b>	3 SWH / 2x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 36 h (3 SWH x 12 weeks)</li> <li>• example classes homework: 32 h (4 SWH x 8 weeks)</li> <li>• repeating the lectures/learning: 12 h (1 SWH x 12 weeks)</li> <li>• additional preparation for exam: 10 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester (1st academic year)
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Holton, J.R., Introduction to Dynamical Meteorology, Academic Press</li> <li>• Gill, A., Atmosphere-Ocean Dynamics, Academic Press</li> <li>• Dutton, J.A., The Ceaseless Wind, Dover</li> <li>• Olbers, D.J., et al., Ocean Dynamics, Springer</li> <li>• Cushman-Roisin, B. &amp; Beckers, J.-M., Introduction to Geophysical Fluid Dynamics: Physical and Numerical Aspects</li> </ul>
<b>Type of examination / exam components</b>	Combination exam Examination performance: Written exam (or as announced by the respective lecturer) Course performance: Portfolio (series of exercise sheets, calculation on blackboard)

<b>Module code</b>	01-01-03-MeTe
<b>Module title</b>	Measurement Techniques
<b>Responsible for the module, lecturers</b>	<u>PD Dr. Andreas Richter</u> / Dr. Christian Mertens
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	A set of practical measurements of meteorological quantities, atmospheric trace gases, ocean currents, environmental radioactivity, and absorption cross-sections using different techniques is performed by the students under supervision of tutors. The measurements obtained in the lab will then be analysed and the experiment, its background and the results as well as their interpretation be documented in a written report.
<b>Learning outcomes/ competencies/ targeted competencies</b>	Participants will perform measurements in Environmental Physics using scientific techniques and methods. They learn to analyse the measurements and to document the results in a written report.
<b>Semester weekly hours (SWH)</b>	4 laboratory (Lab) + 1 lecture (L)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L): 18 h (6 SWH x 3 weeks)</li> <li>• presence (Lab): 24 h (6 SWH x 4 weeks)</li> <li>• preparation, report: 84 h (12 SWH x 7 weeks)</li> <li>• preparation for exam: 54 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester (1st academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Oral exam Course performance: Portfolio (series of successful experiments with accepted reports)

<b>Module code</b>	01-01-03-MES
<b>Module title</b>	Modelling of the Earth System
<b>Responsible for the module, lecturers</b>	Prof. Dr. Gerrit Lohmann / Dr. Silke Thoms / Prof. Dr. Thomas Jung / Prof. Dr. Mihalis Vrekoussis
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Elective for MSc Marine Geosciences + MSc Applied Geosciences
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ol style="list-style-type: none"> <li>1) Types of models, linear vs. non-linear, box &amp; complex models</li> <li>2) Finite differences and spectral methods</li> <li>3) Examples: waves, diffusion, boundaries</li> <li>4) Finite Elements and spectral methods (atmosphere and ocean)</li> <li>5) Model coupling (atmosphere and ocean)</li> <li>6) Data assimilation (Kalman filters etc)</li> <li>7) High-performance computing in modelling (scalability)</li> <li>8) Random Systems (Stochastic equations, Lattice Gases)</li> <li>9) Cryosphere (Sea ice, ice sheets, and permafrost)</li> <li>10) Earth system models including tracers and dynamical vegetation</li> <li>11) Chemistry Transport Models</li> <li>12) Inverse methods in chemistry</li> </ol>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Theoretical concepts of Earth models; Applications
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28h</li> <li>• preparation for exam: 34h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester (1st academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	<p>Module exam</p> <p>Examination performance: Written exam (or as announced by the respective lecturer)</p>

<b>Module code</b>	01-01-03-PhyO1
<b>Module title</b>	Physical Oceanography I
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Monika Rhein</u> / Dr. Reiner Steinfeldt / Dr. Oliver Huhn
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Elective for MSc Marine Geosciences + MSc Applied Geosciences
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	External forcing (radiation, winds, tides), global distribution of important dynamic and physical parameters, water mass formation, wind-driven 3D circulation, geostrophy, meridional overturning, role of ocean in climate change
<b>Learning outcomes/ competencies/ targeted competencies</b>	Understand fundamentals of physical oceanography
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation for exam: 68 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester (1st academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-RemS
<b>Module title</b>	Remote Sensing
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Astrid Bracher</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Compulsory elective for MSc Prozessorientierte Materialforschung Compulsory elective for MSc Physical Geography: Environmental History
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	The course introduces the theoretical background of remote sensing methods (interaction of electromagnetic radiation with matter (spectroscopy), radiative transfer, principles of satellite remote sensing). Mostly passive (thermal emission, backscattered light) but also Active (radar used in sea ice) remote sensing techniques and their data analysis (retrievals) are explained. This is illustrated by a large number of examples available and in use in the different research groups in the Institute of Environmental Physics (IUP).
<b>Learning outcomes/ competencies/ targeted competencies</b>	Basics of radiative transfer, spectroscopy, retrieval techniques. Overview of remote sensing from satellite, ground and airborne platforms in MW, IR and UV-VIS spectral range. Techniques in atmospheric remote sensing, sea ice remote sensing, ocean color remote sensing
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation and re-analysing examples: 32 h (3,2 SWH x 10 weeks)</li> <li>• preparation for exam: 30 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester (1st academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Written exam (or as announced by the respective lecturer) Course performance: Portfolio (series of exercise sheets or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-PresT
<b>Module title</b>	Presentation Techniques in Environmental Physics
<b>Responsible for the module, lecturers</b>	<u>PD Dr. Andreas Richter</u>
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Structure and content of oral presentations, layout and organization of slides, how to give good oral presentations (content, presentation style, body language, ...), how to deal with questions and answers, how to prepare a poster for a conference, how to write an extended abstract, how to do a literature research, how to cite and how to use bibliographic software.
<b>Learning outcomes/ competencies/ targeted competencies</b>	How to prepare and give oral presentations, posters, and extended abstracts on topics of Environmental Physics.
<b>Semester weekly hours (SWH)</b>	2 SWH (2 PS)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L): 28 h (2 SWH x 14 weeks)</li> <li>• preparation of two talks: 40 h (20 h/week x 2 weeks)</li> <li>• preparation of one poster / extended abstracts: 22 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester (2nd academic year)
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: 1 poster or 1 extended abstract (4 pages) Course performance: Successful assessment of 2 oral presentations

<b>Module code</b>	01-01-03-PrEPhy
<b>Module title</b>	Preparatory Project
<b>Responsible for the module, lecturers</b>	Prof. Dr. John P. Burrows, Prof. Dr. Justus Notholt, Prof. Dr. Monika Rhein, Prof. Dr. Annette Ladstätter-Weißenmayer, Prof. Dr. Mihalis Vrekoussis, Prof. Dr. Veronika Eyring as well as further university lecturers of the IUP (Institute of Environmental Physics) / AWI (Alfred Wegener Institute, Helmholtz Centre for Polar and Marine Research) depending on the area of research
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	The content is related to the respective area of research of the preparatory project.
<b>Learning outcomes/ competencies/ targeted competencies</b>	<ul style="list-style-type: none"> <li>• Transfer of a scientific problem/question into an experimental and/or theoretical study</li> <li>• Successful strategies for the planning and conducting of scientific studies</li> <li>• Summarize and present preliminary scientific results in a thesis paper</li> </ul>
<b>Semester weekly hours (SWH)</b>	Working in the laboratories of the IUP / AWI Individual instruction (practical training) Preparation of a thesis paper on a possible research project which - as a rule - should be closely related to the subsequent Master's Thesis.
<b>Workload / credit points</b>	18 CP, 540 h
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	Winter semester (2nd academic year)
<b>Literature</b>	Will be announced by the respective examiners.
<b>Type of examination / exam components</b>	<p>Module exam (graded)</p> <ul style="list-style-type: none"> <li>• Successful assessment of the preparatory project</li> <li>• Preparation of a thesis paper on a research project which can be conducted within the context of the Master's Thesis</li> <li>• Students have 12 weeks to work on their preparatory project and to prepare the final thesis paper</li> <li>• The thesis paper has to be written in English and by one person alone (not a group).</li> <li>• The thesis paper will be evaluated by two examiners.</li> </ul>

## Module Master Thesis (incl. Colloquium)

<b>Module code</b>	01-01-03-MTEPhy
<b>Module title</b>	Master Thesis
<b><u>Responsible for the module, lecturers</u></b>	<u>Prof. Dr. John P. Burrows</u> , Prof. Dr. Justus Notholt, Prof. Dr. Monika Rhein, Prof. Dr. Annette Ladstätter-Weißemayer, Prof. Dr. Mihalis Vrekoussis, Prof. Dr. Veronika Eyring as well as further university lecturers of the IUP (Institute of Environmental Physics) / AWI (Alfred Wegener Institute, Helmholtz Centre for Polar and Marine Research) depending on the area of research
<b>Type of module</b>	Compulsory for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	As per §6 (2) of the subject-specific examination regulations, 66 CPs and thus passing all the compulsory modules except the module Presentation Techniques in Environmental Physics are required for the registration of the master thesis.
<b>Learning contents</b>	The content is related to the respective area of research of the Master's Thesis.
<b>Learning outcomes/ competencies/ targeted competencies</b>	<ul style="list-style-type: none"> <li>• Transfer of a scientific problem/question into an experimental and/or theoretical study</li> <li>• Successful strategies for the planning and conducting of scientific studies</li> <li>• Ability for a critical evaluation, assessment and discussion of own scientific results</li> <li>• Summarize and present scientific results in a Master's Thesis</li> </ul>
<b>Semester weekly hours (SWH)</b>	Master's Thesis Colloquium to the Master's Thesis
<b>Workload / credit points</b>	30 CP, 900 h
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	Summer semester (2nd academic year)
<b>Literature</b>	Will be announced by the respective examiners.
<b>Type of examination / exam components</b>	Module exam (graded) <ul style="list-style-type: none"> <li>• Successful assessment of the Master's Thesis (graded)</li> <li>• Successful colloquium to the Master's Thesis (graded)</li> <li>• Master's Thesis and colloquium are marked in a common grade; grade master's thesis will be considered with 2/3 and grade for colloquium with 1/3</li> </ul>

## Elective Modules

<b>Module code</b>	01-01-03-AtCM1
<b>Module title</b>	Atmospheric Chemistry Modelling: Part 1 (Theory)
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Mihalis Vrekoussis / Dr. Nikos Daskalakis / Dr. Alexandros Poulidis</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Concept of chemistry transport models</li> <li>• Atmospheric Chemical Composition/Processes</li> <li>• Model equations and numerical approaches focusing on the:               <ol style="list-style-type: none"> <li>a) formulation of atmospheric rates</li> <li>b) numerical methods for chemical systems</li> </ol> </li> <li>• Surface fluxes/emissions</li> <li>• Observations and model evaluations</li> <li>• Inverse modeling for atmospheric chemistry</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Participants will have the chance to: Get a theoretical overview of the concepts of numerical atmospheric chemistry modelling, to review fundamentals of atmospheric chemistry and physics, to formulate model equations and numerical (differential) approaches for various systems focusing on atmospheric chemistry mechanisms and to assess the role of chemistry transport models as components of the atmospheric observing system. Concepts of inverse modelling will be also presented.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 42 h (3 SWH x 14 weeks)</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Oral exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-AtCM2
<b>Module title</b>	Atmospheric Chemistry Modelling: Part 2 (Laboratory)
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Mihalis Vrekoussis / Dr. Nikos Daskalakis / Dr. Alexandros Poulidis</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• introduction to the moguntia model</li> <li>• explanation input files manipulation and analysis of results</li> <li>• study of interhemispheric transports</li> <li>• study the budget of simulated CO</li> <li>• simulate the growth of CO<sub>2</sub> mixing ratios</li> <li>• simulate the concentrations of methyl chloroform</li> <li>• simulate the methyl-chloroform/OH constrains</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Participants will have the chance to: Have a hands-on experience on how atmospheric chemistry models work, prepare the input needed by a model, run the model and process the output of the model in order to come to scientific conclusions
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 42 h (3 SWH x 14 weeks)</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-AtSp
<b>Module title</b>	Atmospheric Spectroscopy
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Justus Notholt</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory for MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Prism and grating spectrometers, Fourier-Transform-Spectroscopy, transitions, rotational spectra, vibrational spectra, rotational-vibrational spectra, remote sensing methods
<b>Learning outcomes/ competencies/ targeted competencies</b>	Basics of spectroscopy, basics of molecular spectroscopy. Understanding and interpretation of measured spectra with regard to the structure of the molecules. Basics of prism, grating and FTIR-spectroscopy, understanding of remote sensing methods.
<b>Semester weekly hours (SWH)</b>	2 SWH / 2x lecture (L)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L): 28 h (2 SWH x 14 weeks)</li> <li>• preparation + learning: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Written or oral exam (as announced by the respective lecturer)

<b>Module code</b>	01-01-03-BGC
<b>Module title</b>	Biogeochemistry
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Annette Ladstätter-Weißenmayer</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Elective for MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Global biochemical cycles of elements, important biophysical processes in atmosphere and ocean, carbon-, methane-, nitrogen and water cycle, greenhouse gases
<b>Learning outcomes/ competencies/ targeted competencies</b>	Advanced biogeochemistry
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Oral exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-CDOL
<b>Module title</b>	Chemistry and Dynamics of the Ozone Layer
<b>Responsible for the module, lecturers</b>	<u>PD Dr. Björn-Martin Sinnhuber</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Dynamics and chemistry of the ozone layer, implementation of a numerical model of the ozone layer and model based analyses <ul style="list-style-type: none"> <li>• The ozone layer and its role in the climate system</li> <li>• Introduction to scientific programming (with practical exercises)</li> <li>• Atmospheric chemistry modeling (with practical exercises)</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Further understanding of chemistry-climate-interactions, skills in scientific computer programming
<b>Semester weekly hours (SWH)</b>	Block course (corresponding to 2 SWH)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 40 h (block course 5 days)</li> <li>• preparation, learning + examples: 25 h</li> <li>• preparation for exam: 25 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester
<b>Literature</b>	No particular literature needed, recommended reading will be announced in the course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Oral exam (or as announced by the respective lecturer) Course performance: Programming of a chemistry model

<b>Module code</b>	01-01-03-ClIM1
<b>Module title</b>	Climate Modelling: Part 1
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Veronika Eyring</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Elective for MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Introduction to Climate Modelling Types of Climate Models Components of Atmosphere Ocean General Circulation Models (AO-GCMs) Fundamentals and representation in GCMs: Radiation Fundamentals and representation in GCMs: Dynamics of the Atmosphere Fundamentals and representation in GCMs: Ocean and sea ice component Fundamentals and representation in GCMs: Land component Parametrizations in climate models Steps in climate model formulation Frequently Asked Questions IPCC Assessment Reports Introduction to the ICON climate model Computational exercises with the ICON model: running a climate model Computation exercises in Python: plotting ICON model output
<b>Learning outcomes/ competencies/ targeted competencies</b>	Overview how a climate model works and how to set up a climate model simulation (without covering all details); getting some first experience with running a climate model and plotting its output using python
<b>Semester weekly hours (SWH)</b>	Block course(corresponding to 2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (block course 5 days)</li> <li>• preparation, learning + examples: 42 h</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Written exam or oral exam (as announced by the respective lecturer)

<b>Module code</b>	01-01-03-CliM2
<b>Module title</b>	Climate Modelling: Part 2
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Veronika Eyring</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik
<b>Content-related prior knowledge or skills</b>	Climate Modelling: Part 1
<b>Learning contents</b>	<p>Components of Earth System Models (ESMs)  Fundamentals and representation in ESMs: carbon cycle  Fundamentals and representation in ESMs: atmospheric chemistry  Fundamentals and representation in ESMs: aerosols  Earth system model evaluation with observations  Earth system feedbacks and projections  Understanding and modelling the Earth System with Machine Learning  Computational exercises with the Earth System Model Evaluation Tool (ESMValTool, <a href="http://www.esmvaltool.org/">http://www.esmvaltool.org/</a>) and interpretation of ESM results  Computational exercises hands-on Machine Learning</p>
<b>Learning outcomes/ competencies/ targeted competencies</b>	<p>Overview how an Earth system model works and learn about results of current models regarding climate change; first experience how to analyse Earth system model output with the ESMValTool and how to use machine learning techniques to better understand and model the Earth system</p>
<b>Semester weekly hours (SWH)</b>	Block course (corresponding to 2 SWH / 1,5x lecture (L) + 0,5x example classes (EC))
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (block course 5 days)</li> <li>• preparation, learning + examples: 42 h</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	<p>Module exam  Examination performance: Written exam or oral exam (as announced by the respective lecturer)</p>

<b>Module code</b>	01-01-03-CliS2
<b>Module title</b>	Climate System II
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Gerrit Lohmann / Dr. Martin Werner</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Climate models, possibilities and limitations to observe climate change, ice ages and orbital variations, Holocene, glacial-interglacial variability; Cenozoic climate, abrupt climate change; climate scenarios, sea level, environmental archives, paleoclimate data, biogeochemical cycles, feedbacks; Spectra and time series analysis; Modes of variability
<b>Learning outcomes/ competencies/ targeted competencies</b>	Advanced climate course: Theories, models, observations. Past-present-future climate changes
<b>Semester weekly hours (SWH)</b>	2 SWH / 2x lecture (L)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L): 28 h (2 SWH x 14 weeks)</li> <li>• preparation + learning: 42 h (3 SWH x 14 weeks)</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Bradley, Paleoclimatology-Reconstructing climates of the Quaternary, 1999</li> <li>• Saltzman, Dynamical Paleoclimatology - A generalized theory of global climate change, Academic Press, San Diego, 2002</li> <li>• Ruddiman, Earth's Climate Past and Future</li> <li>• Paleoclimate, Global Change and the Future, 2003 by Keith D. <b>Type of examination / exam components</b>	Module exam Examination performance: Oral exam

<b>Module code</b>	01-01-03-DIP
<b>Module title</b>	Digital Image Processing
<b>Responsible for the module, lecturers</b>	<u>Dr. Gunnar Spreen</u> / Dr. Christian Melsheimer
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory for MSc Space Sciences and Technologies Compulsory elective for MSc Prozessorientierte Materialforschung
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Digital images, sampling</li> <li>• Grey level transformations, color images</li> <li>• Image enhancement using filters</li> <li>• Image analysis methods using segmentation, feature extraction and classification</li> <li>• Fourier transformation of digital images, linear filters in spatial and frequency domains</li> <li>• Data compression, image coding, image formats</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Fundamentals, basic concept and methods of digital image processing, enabling the students to identify and understand image processing problems (encountered in Environmental Physics, Space Science etc.) and to find appropriate solutions
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English

<b>Type of examination / exam components</b>	Combination exam Examination performance: Oral exam (or as announced by the respective lecturer) Course performance: Portfolio (series of exercise sheets or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-FES
<b>Module title</b>	Fortran for Environmental Sciences
<b>Responsible for the module, lecturers</b>	<u>Dr. Nikos Daskalakis</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Introduction to programming languages and differences between compiled/interpreted languages</li> <li>• Flow charts and their use in coding</li> <li>• Structure of a serial FORTRAN code</li> <li>• Implicitly, variables, intrinsic functions</li> <li>• Input/output of a program</li> <li>• Loops in coding and their use</li> <li>• Logical statements</li> <li>• Subroutines</li> <li>• READ-WRITE-PRINT-FORMAT</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Participants will have the chance to: Learn the basic structure and rules of FORTRAN and apply this knowledge in computing complex environmentally relevant systems.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 42 h (3 SWH x 14 weeks)</li> <li>• preparation for exam: 20 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Oral exam (successful assessment of an environmental problem using programming or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-FVTT
<b>Module title</b>	Fundamentals of Volcanology and Tephra Transport
<b>Responsible for the module, lecturers</b>	<u>Dr. Alexandros Poulidis</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<p>Introduction to volcanology</p> <ul style="list-style-type: none"> <li>The volcanic system</li> <li>Magma composition and types of eruptive activity</li> <li>Volcanic plumes and volcanic hazards</li> </ul> <p>Volcanic emissions transport and deposition</p> <ul style="list-style-type: none"> <li>Introduction to tephra observation and modelling</li> <li>Tephra ground deposits</li> <li>Tephra morphology and aggregation</li> <li>Airborne tephra observations</li> <li>Volcanic ash and the climate</li> <li>Volcanic gas emissions</li> </ul> <p>Operational aspects of volcanology</p> <ul style="list-style-type: none"> <li>Operational tephra monitoring and forecasting</li> <li>Volcanic hazard and risk assessment</li> </ul> <p>Lab - Numerical modelling techniques</p> <ul style="list-style-type: none"> <li>Modelling volcanic plumes</li> <li>Modelling tephra transport</li> <li>Source parameter estimation techniques</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Students will develop an understanding of fundamental concepts in volcanology and get hands-on experience with applied modelling. The module will give students relevant skills that will allow them to look for employment opportunities in volcano observatories, airports, and volcanic ash advisory centres around the world.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>

<b>Module code</b>	01-01-03-GenM
<b>Module title</b>	General Meteorology
<b>Responsible for the module, lecturers</b>	<u>Dr. Anne-Marlene Blechschmidt</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Typical flow patterns of the atmosphere, static (in-)stability, circulation systems, mid-latitude cyclones.
<b>Learning outcomes/ competencies/ targeted competencies</b>	Fundamentals of general meteorology.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Oral exam (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-GCC
<b>Module title</b>	Global Carbon Cycle
<b>Responsible for the module, lecturers</b>	<u>Dr. Christoph Völker</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Compulsory elective for MSc Prozessorientierte Materialforschung Compulsory elective for MSc Physical Geography: Environmental History
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Working of the natural and anthropogenic greenhouse effect</li> <li>• Existence and magnitude of the different reservoirs of carbon in the earth system, and their role on different climatic time-scales</li> <li>• role of carbon in the chemistry of the ocean and in setting its pH</li> <li>• changes in the carbon cycle over glacial-interglacial cycles</li> <li>• carbon isotopes as tool to understand the cycling of carbon</li> <li>• influence of weathering and volcanism on the carbon cycle over geological time-scales</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Knowledge of the different carbon reservoirs on earth, and their role on different timescales, from current to geological. Understanding that the cycling of carbon between those reservoirs is related to global climate by a number of feedbacks.
<b>Semester weekly hours (SWH)</b>	2 SWH / 2x lecture (L)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L): 28 h (2 SWH x 14 weeks)</li> <li>• preparation + learning: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>

<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Cuffey&amp;Patterson, Physics of Glaciers, 2010</li> <li>• Bamber&amp;Payne, Mass Balance of the Cryosphere, 2004</li> <li>• Lubin&amp;Massom, Polar Remote Sensing, 2006</li> <li>• <a href="http://glaziologie.de/vernagt/vernagt.html">http://glaziologie.de/vernagt/vernagt.html</a></li> </ul> <p>More will be announced in the respective course</p>
<b>Type of examination / exam components</b>	<p>Combination exam</p> <p>Examination performance: Preparation of final report (participation in the field course is mandatory for taking the exam).</p> <p>Course performance: Data processing and analysis</p>

<b>Module code</b>	01-01-03-ITE
<b>Module title</b>	Instrumental Techniques for Environmental Measurements
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Mihalis Vrekoussis</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Compulsory elective for MSc Prozessorientierte Materialforschung
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Theoretical aspects on analytical methods including spectroscopic and chromatographic techniques. Introduction to the principle of operation and design of instruments used in environmental analysis.
<b>Learning outcomes/ competencies/ targeted competencies</b>	Students are expected to enhance their knowledge on the theoretical aspects, design and operation of a number of instruments used in environmental analysis. Ultimately, students will improve their analytical thinking by recognizing and understanding the advantages and disadvantages of the environmental instrumental methods to be used depending on the material under investigation.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>

<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Oral exam (or as announced by the respective lecturer) Course performance: 1 presentation (or as announced by the respective lecturer)

<b>Module code</b>	01-01-03-MaMCS
<b>Module title</b>	Mathematical Modelling of Complex Systems
<b>Responsible for the module, lecturers</b>	<u>Dr. Silke Thoms</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Prozessorientierte Materialforschung
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<p>Steps in the development of mathematical/computational techniques originated from the emerging interdisciplinary field of complex systems science to get insight into the function of the complex environmental systems.</p> <p>Basic computational techniques:</p> <ul style="list-style-type: none"> <li>• solution of static and discrete/continuous-time models</li> <li>• methods to solve continuous-field models</li> <li>• mean-field approximation and cellular automata</li> <li>• networks and agent-based models</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Ability to understand and analyse mathematical models for complex systems from selected fields in the natural and earth sciences (e.g. phase transitions and pattern formation, systems biology and ecology, biogeochemistry and oceanography).
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Numerical Recipes: William H. Press, Saul Teukolsky, William T. Vetterling and Brian P. Flannery</li> </ul>
<b>Type of examination / exam components</b>	<p>Module exam</p> <p>Examination performance: Oral exam (or as announced by the respective lecturer)</p>

<b>Module code</b>	01-01-03-MRS
<b>Module title</b>	Microwave Remote Sensing
<b>Responsible for the module, lecturers</b>	<u>Dr. Gunnar Spreen</u> / Dr. Christian Melsheimer
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Microwaves: Definition, physical quantities to describe them</li> <li>• Microwave antennas, working principle of radiometers and radars</li> <li>• Interaction of microwaves with the atmosphere and the earth surface, radiative transfer</li> <li>• Retrieval of geophysical parameters from microwave measurements</li> <li>• Current microwave instruments and satellites</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Knowledge of basic concepts and methods of microwave remote sensing, enabling the students to appropriately deal with microwave remote sensing data, understand and interpret them
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English

<b>Module code</b>	01-01-03-OOOC
<b>Module title</b>	Ocean Optics and Ocean Color Remote Sensing
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Astrid Bracher</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<p>First, the course covers the principles of ocean optics. Topics included are basic physics of light and interaction of light with matter in water. This includes the theory behind inherent and apparent optical properties and the radiative transfer equation, e.g., the light field within the ocean is explained and the water-leaving radiance and remote-sensing reflectance terms are introduced. The effect of the various seawater constituents' (absorption, scattering, fluorescence) on ocean reflectance is presented. Optical instrumentation and measurement techniques to measure the relevant parameters are introduced. Secondly, the lecture focuses on ocean color remote sensing. This includes the principles of ocean color remote sensing, an overview of the technology of the instruments commonly used as ocean color satellite sensors and their satellite platforms. But also the streams of the data processing from raw data to the final geophysical product. Especially explained are various atmospheric correction methods and retrieval techniques of ocean color data products, such as phytoplankton biomass, phytoplankton photosynthetic activity, major phytoplankton groups, other particulates, coloured dissolved organic matter and light penetration depth. Finally, also validation techniques of ocean color data products and the application of these data in global ecosystem and biogeochemical models are presented.</p>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Basics of radiative transfer in water (inherent and apparent optical properties) and ocean color remote sensing, ocean optics measurement techniques, atmospheric correction, empirical, semi-analytical, neuronal network retrieval techniques to determine water constituents and radiation in the water, validation of algorithms and sensors and potential of such data for application in ecosystem and climate studies and marine and coastal management.
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation for rapport: 29 h</li> <li>• preparation for exam: 33 h</li> </ul>

<b>Module code</b>	01-01-03-PhyO2
<b>Module title</b>	Physical Oceanography II
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Monika Rhein</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik Elective for MSc Marine Geosciences + MSc Applied Geosciences
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	The topics of the lecture varies and will be announced at the start of the lecture. Topics include ocean change and impact on climate, more insight in climate relevant processes (large and small scale), method development, air - sea interactions.
<b>Learning outcomes/ competencies/ targeted competencies</b>	Inightful knowledge of processes important for climate role of ocean
<b>Semester weekly hours (SWH)</b>	2 SWH / 1x lecture (L) + 1x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Module exam Examination performance: Written or oral exam (as announced by the respective lecturer)

<b>Module code</b>	01-01-03-PoOc
<b>Module title</b>	Polar Oceanography
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Torsten Kanzow</u>
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	Properties of cold sea water, sea ice formation, ocean – sea ice interaction, arctic circulation and water mass formation, antarctic circulation and water mass formation, ocean – ice shelf interaction
<b>Learning outcomes/ competencies/ targeted competencies</b>	Introduction to polar oceanography
<b>Semester weekly hours (SWH)</b>	2 SWH / 1,5x lecture (L) + 0,5x example classes (EC)
<b>Workload / credit points</b>	3 CP, 90 h <ul style="list-style-type: none"> <li>• presence (L + EC): 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 28 h (2 SWH x 14 weeks)</li> <li>• preparation for exam: 34 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Combination exam Examination performance: Written exam (as announced by the respective lecturer) Course performance: Portfolio (series of exercise sheets)

<b>Module code</b>	01-01-03-PPO
<b>Module title</b>	Practical Physical Oceanography
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Torsten Kanzow</u> / Dr. Wilken-Jon von Appen
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	Compulsory elective for MSc Physik
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<p>The students will join the research vessel Heincke in Helgoland. During day trips in the North Sea around Helgoland the instructors will first demonstrate the usage of oceanographic measurement equipment. The students will subsequently handle the equipment themselves under supervision. Technically, this includes: software preparation, equipment preparation, decision regarding sampling strategy, hardware demobilization, data recovery, data conversion, data analysis.</p> <p>The investigated topics include:</p> <ul style="list-style-type: none"> <li>• Ocean stratification and water masses based in hydrographic measurements;</li> <li>• Ocean circulation based on ocean current measurements (underway + mooring);</li> <li>• Ocean forcing: Meteorological measurements;</li> <li>• Ocean surface processes: Underway surface measurements;</li> <li>• Biological sampling</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	<ul style="list-style-type: none"> <li>• Familiarity with modern way of performing observations from a research vessel.</li> <li>• Organization of field work including interdependence of different physical oceanographic and interdisciplinary measurement techniques.</li> <li>• Skills regarding data acquisition, analysis, and interpretation.</li> <li>• Skills with reporting on field work.</li> </ul>
<b>Semester weekly hours (SWH)</b>	Block/Field course (corresponding to 2 SWH)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>• presence (L + EC): 45 h (field course 40 h + 5 h preparatory seminar)</li> <li>• postprocessing / protocol writing: 20 h</li> <li>• preparation for exam: 25 h</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	<p>Combination exam</p> <p>Examination performance: Preparation of final report/essay (participation in the field course is mandatory for taking the exam).</p> <p>Course performance: Processing of a task incl. presentation of results</p>

## Elective Modules / Course Offers from other M.Sc. Programmes

<b>Module code</b>	01-29-03-RSOC
<b>Module title</b>	Remote Sensing of Ocean and Cryosphere
<b><u>Responsible for the module, lecturers</u></b>	<u>Dr. Gunnar Spreen</u> , Prof. Dr. Astrid Bracher, Prof. Dr. Christian Haas, Dr. Mariana Soppa, Dr. Ilaria Stendardo
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	MSc Space Sciences and Technologies
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>• Concepts for satellite remote sensing of the ocean and cryosphere</li> <li>• Microwave radar and radiometer observations of sea and land ice and of sea surface temperature and salinity</li> <li>• Altimetry for sea surface height, circulation, sea level and ice thickness change</li> <li>• Optical satellite data for ocean color and sea ice</li> <li>• Error analysis and statistics</li> <li>• Practical examples and applications to use satellite data sets from oceanography and cryosphere</li> <li>• Satellite data processing</li> </ul> <p>A list of references will be provided at the start of the semester.</p>
<b>Learning outcomes/ competencies/ targeted competencies</b>	Students gain knowledge in basics and application of remote sensing of sea ice extent, type, drift and thickness, ice shelves and glaciers, sea surface height, winds over the ocean, waves, ocean color, surface temperature and salinity, sea level rise, ocean color and other remote sensing applications for ocean and cryosphere.
<b>Semester weekly hours (SWH)</b>	4 SWH / 2x lecture (L) + 2x example classes (EC)
<b>Workload / credit points</b>	6 CP, 180 h <ul style="list-style-type: none"> <li>• presence (L + EC): 56 h (4 SWH x 14 weeks)</li> <li>• preparation, learning + examples: 56 h (4 SWH x 14 weeks)</li> <li>• preparation of reports: 68 h (17h x 4 reports)</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Summer semester, yearly
<b>Duration</b>	1 semester / summer semester
<b>Literature</b>	Will be announced in the respective course.
<b>Type of examination / exam components</b>	Partial exam Examination performance: Written examination by submitting reports Course performance: Successful assessment of exercise reports

<b>Module code</b>	08-M27-1-EA1-1 (in MSc Physical Geography: Environmental History part of PG-EA)
<b>Module title</b>	Lakes and lacustrine sediments (in MSc Physical Geography: Environmental History part of Lacustrine Environmental Archives I)
<b>Responsible for the module, lecturers</b>	<u>Dr. Christian Ohlendorf</u> / Dr. Catalina Gebhardt
<b>Type of module</b>	Elective for MSc Environmental Physics
<b>Programs using the module</b>	MSc Physical Geography: Environmental History
<b>Content-related prior knowledge or skills</b>	No formal requirements
<b>Learning contents</b>	<ul style="list-style-type: none"> <li>▪ Introduction into lake systems</li> <li>▪ Basics of limnology</li> <li>▪ Field and laboratory tools in limnogeology</li> <li>▪ Particle dynamics and processes in lakes</li> <li>▪ Imaging of the lake floor and the sediments</li> <li>▪ Lake sediments as paleoclimate archives</li> <li>▪ Different proxies in lake sediments and basic statistics</li> <li>▪ Dating methods and age model generation</li> <li>▪ Case studies of different lake systems</li> </ul>
<b>Learning outcomes/ competencies/ targeted competencies</b>	<p>The students will obtain knowledge about</p> <ul style="list-style-type: none"> <li>▪ abiotic and biotic processes of sediment formation in lakes</li> <li>▪ lake sediments as paleoclimate and paleoenvironmental archives</li> </ul>
<b>Semester weekly hours (SWH)</b>	2 SWH / 2x lecture (L)
<b>Workload / credit points</b>	<p>3 CP, 90 h</p> <ul style="list-style-type: none"> <li>▪ 28 h lecture</li> <li>▪ 37 h self-revision of lectures and additional complementary material</li> <li>▪ 25 h study time for the final exam</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	Winter semester, yearly
<b>Duration</b>	1 semester / winter semester

## Special Module Sino-German Master Programme in Marine Sciences

<b>Module code</b>	01-01-03-APhOc
<b>Module title</b>	Advanced Physical Oceanography
<b>Responsible for the module, lecturers</b>	<u>Prof. Dr. Monika Rhein</u>
<b>Type of module</b>	Compulsory for Students of the Ocean University of China taking part in the Sino-German Master Programme in Marine Sciences while studying in their 3 <sup>rd</sup> and 4 <sup>th</sup> semester at the University of Bremen.
<b>Programs using the module</b>	
<b>Courses</b>	1) 01-01-03-PhOc1 / Seminar on Physical Oceanography I 2) 01-01-03-PhOc2 / Seminar on Physical Oceanography II
<b>Content-related prior knowledge or skills</b>	No formal requirements, but basic knowledge in Physical Oceanography is desirable
<b>Learning contents</b>	Specific topics from Physical Oceanography and the role of the ocean for climate change
<b>Learning outcomes/ competencies/ targeted competencies</b>	A detailed understanding of climate relevant processes in Physical Oceanography, the linkage between ocean and climate change / critical and analytical thinking and its application to problems in earth sciences
<b>Semester weekly hours (SWH)</b>	1) 2 SWH 2) 2 SWH
<b>Workload / credit points</b>	6 CP, 180 h  1) 3 CP, 90 h <ul style="list-style-type: none"> <li>• presence: 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning: 22</li> <li>• preparation for exam: 40</li> </ul> 2) 3 CP, 90 h <ul style="list-style-type: none"> <li>• presence: 28 h (2 SWH x 14 weeks)</li> <li>• preparation, learning: 22</li> <li>• preparation for exam: 40</li> </ul>
<b>Language of instruction</b>	English
<b>Frequency</b>	1) Winter semester 2) Summer semester
<b>Duration</b>	2 semesters  1) 1 semester 2) 1 semester
<b>Literature</b>	Will be announced in the respective seminars.
<b>Type of examination / exam components</b>	Combination Exam 1) Examination performance: Oral presentation (or as announced by the respective lecturer) 2) Examination performance: Oral presentation (or as announced by the respective lecturer)
